

SBS 204

Lab #6

Due 03/18 @ 11:59 pm

- 1) Calculate confidence intervals for the mean of one of your ordinal variables split by one of your nominal variables.
 - a. Determine your confidence level
 - b. Calculate the confidence intervals
 - c. Interpret the confidence interval in the context of your variables

*If you want more practice on confidence intervals, do this again for a different categorical variable.
