

Job Search Report

1. Find 5 BIG jobs that are currently available (anywhere you might want to live) that require mathematical/statistical knowledge that you would be potentially interested in (on Indeed, LinkedIn, etc.).
2. Pick 3 career profiles to read about in *101 Careers in Mathematics* (2019) by Deanna Haunsberger and Robert Thompson (list the names on our Moodle Google Document that you are choosing to read about).
3. Write a brief report with a bullet point for each job (all 8 from above) that gives the name of the BIG company/position, what skills/degree are required (if known), and what interests you about the position or career.
4. You will share the positions/careers with classmates on the due date during class in any format you desire – presenting from a slide, writing on the chalkboard, discussing verbally, etc.
